

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A ~~display for a~~ client terminal for a television for an interactive video casting system, the display client terminal comprising:

a display screen;

a first tuner receiving a television broadcast signal for display by the television and configured to detect a trigger in the television broadcast signal;

a second tuner connected to a communication network and configured to send and receive information related to an event available through the interactive video casting system; and

a display driver coupled to the display screen;

wherein, upon detecting a trigger embedded in the television broadcast signal via the first tuner, the display client terminal is configured to:

obtain screen indicia indicative of an event available through the interactive video casting system from the communication network via the second tuner according to information in the trigger detected in the television broadcast signal; and

cause the display driver to display screen indicia via the display screen at least alternatively to being displayed via the television.

2. (Currently Amended) The display client terminal of claim 1 wherein the screen indicia includes indicia indicative of events available other than through the client terminal.

3. (Currently Amended) The display client terminal of claim 2 wherein the events include at least one of a voicemail alert, incoming phone call alert, and message system alert.

4. (Currently Amended) The display client terminal of claim 1 wherein the screen indicia is capable of being simultaneously displayed via a screen of the television and via the display screen.

5. (Currently Amended) The display client terminal of claim 1 wherein the events include at least one of reminders, news headlines, e-commerce opportunities, sports scores, program

reminders, program information, television program reminders, e-mail alerts, instant messages and emergency alerts.

6. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the screen indicia comprises static text.

7. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the screen indicia comprises dynamic text.

8. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the screen indicia comprises a combination of dynamic and static text.

9. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the screen indicia comprises at least one graphical image.

10. (Currently Amended) The ~~display~~ client terminal of claim 9 wherein the screen indicia comprises a combination of text and at least one graphical image.

11. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the display screen is at least one of a liquid crystal display, thin-film transistor (TFT) liquid crystal display, light emitting diode display, backlit display, seven-segment display, four-digit display, and gas plasma display.

12. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the display screen is capable to be detached from the client terminal.

13. (Currently Amended) The ~~display~~ client terminal of claim 1 wherein the display screen is capable to present a plurality of indicia.

14. (Previously Presented) In an interactive video casting network, a method comprising:

dynamically receiving a trigger related to an event available via a client terminal for a television via a first tuner, wherein the trigger is embedded in a television broadcast signal intended for display via a screen of the television;

dynamically obtaining data related to the event via a second tuner according to information in the trigger;

processing the received data to generate indicia indicative of the event; and

presenting the generated indicia as a screen element via a display screen for the client terminal at least alternatively to presenting the generated indicia via the screen of the television.

15. (Original) The method of claim 14 wherein the display screen covers substantially an entire front of the client terminal.

16. (Original) The method of claim 14 wherein the display screen includes soft buttons.

17. (Original) The method of claim 14 wherein processing the received data includes generating indicia consistent with user preferences.

18. (Original) The method of claim 17 wherein the user preferences include preferences related to a format of the generated indicia.

19. (Previously Presented) The method of claim 17 wherein the user preferences include preferences related to a category of events related to the generated indicia.

20. (Original) The method of claim 14 wherein an event comprises at least one of reminders, news headlines, e-commerce opportunities, sports scores, program reminders, record reminders, e-mail alerts, instant messages, and emergency alerts.

21. (Original) The method of claim 14, further comprising presenting indicia related to an operational feature of the client terminal.

22. (Original) The method of claim 21 wherein the operational feature of the client terminal includes at least one of channel number, time, video cassette recorder (VCR) setting, digital video disk (DVD) setting, menu information, and program information.

23. (Original) The method of claim 21 wherein presenting the generated indicia includes presenting indicia of an event sequentially with indicia of the operational feature of the client terminal.

24. (Original) The method of claim 14 wherein the received data is sent along with a trigger that accompanies a broadcast television signal received by the client terminal.

25. (Original) The method of claim 14, further comprising presenting the generated indicia as sound.

26. (Original) The method of claim 25 wherein the generated indicia includes an emergency alert tone.

27. (Previously Presented) An apparatus, comprising:
a client terminal for a television for an interactive video casting network comprising a first and second tuner, wherein the first tuner is configured to receive a television broadcast signal displayable via the television, and wherein the second tuner is configured to send and receive information via a communication network coupled to the second tuner, and wherein the client terminal is configured to detect a trigger relating to an event embedded within the television broadcast signal received via the first tuner and dynamically obtain data regarding the event from a data source over the communication network via the second tuner according to information in the trigger; and

a display area coupled to the client terminal capable to present screen indicia of the event from the obtained data, the display area of the client terminal capable to present the screen indicia at least alternatively to presentation of the screen indicia on a screen of the television.

28. (Original) The apparatus of claim 27 wherein the data source comprises an Internet.

37. (Original) The system of claim 36 wherein the display screen is further capable to present indicia of operational features related to the client terminal.

38. (Original) The system of claim 37 wherein the display screen is capable to display indicia of the operational features alternately with indicia of the events.

39. (Currently Amended) In an interactive video casting system, a method comprising:
receiving a trigger in conjunction with a broadcast content signal;
~~filtering the trigger according to user-specified criteria, and if the trigger is acceptable~~
~~according to the user-specified criteria;~~
obtaining an event represented by the trigger;
generating screen indicia an interactive icon on a television for of the obtained event;
~~configuring the generated screen indicia according to the user-specified criteria; and~~
~~if a user selects the interactive icon, displaying the generated screen indicia information~~
about the obtained event on a display of for a client terminal that is coupled to ~~for a~~ the television;
~~wherein the screen indicia is capable of being displayed at least alternatively to being displayed on~~
~~the television.~~

40. (Original) The method of claim 39 wherein the trigger comprises a television trigger inserted into the broadcast content signal.

41. (Original) The method of claim 39 wherein obtaining the event represented by the trigger includes extracting information from a web page.

42. (Original) An apparatus, comprising:
a client terminal for a television for an interactive video casting system,
wherein the television includes a screen to display information available from the interactive
video casting system,
wherein the television is coupled to the client terminal,

wherein the client terminal is capable of being communicatively coupled to the interactive video casting system to receive the information available from the interactive video casting system and to cause presentation of at least some of the information on the screen of the television,

wherein the interactive video casting system includes a plurality of content sources communicatively coupled to a plurality of broadcast centers,

wherein the broadcast centers are coupled to storage units to store at least some of the information to be made available to the client terminal, and

wherein the interactive video casting system is capable to provide the information to the client terminal via different communication channels, including at least one of a plurality of television broadcast channels and a communication channel with a communication network; and

a display area coupled to the client terminal,

wherein the display area is capable to present screen indicia of events dynamically received from the interactive video casting system, and

wherein the display area of the client terminal is capable to present the screen indicia at least alternatively to presentation on the screen of the television.

43. (Original) The apparatus of claim 42 wherein the display area is detachable from the client terminal.

44. (Original) The apparatus of claim 42 wherein the client terminal is capable to present an audible indicator representative of a received event.

45. (Original) An apparatus, comprising:

a client terminal for a television for an interactive video casting system,

wherein the television includes a screen to display information available from the interactive video casting system,

wherein the television is coupled to the client terminal,

wherein the client terminal is capable of being communicatively coupled to the interactive video casting system to receive the information available from the interactive video casting system and to cause presentation of at least some of the information on the screen of the television,

wherein the interactive video casting system includes a plurality of content sources communicatively coupled to a plurality of broadcast centers,

wherein the broadcast centers are coupled to storage units to store at least some of the information to be made available to the client terminal, and

wherein the interactive video casting system is capable to provide the information to the client terminal via different communication channels, including at least one of a plurality of television broadcast channels and a communication channel with a communication network; and

a display area coupled to the client terminal,

wherein the display area is capable to present screen indicia of events dynamically received from the interactive video casting system,

wherein the display area is capable to display the screen indicia based on user preferences, and

wherein the display area of the client terminal is capable to present the screen indicia at least alternatively to presentation on the screen of the television.

46. (Original) The apparatus of claim 45 wherein the display area is capable of being detached from the client terminal.

47. (Original) The apparatus of claim 45 wherein the broadcast centers comprise part of a satellite delivery system.

48. (Currently Amended) In an interactive video casting network, a system comprising:
a means for dynamically receiving a television broadcast signal suitable for a display by a television;

a means for detecting a trigger corresponding to an event embedded in the received television broadcast signal;

a means for obtaining data related to the event over a communication network according to information in the detected trigger;

a means for processing the obtained data to generate an interactive icon on a television for
~~indicia indicative of the event~~; and

a means for presenting information about the obtained event ~~the generated indicia~~ as a screen element via a display screen ~~of for the client terminal~~ if a user selects the interactive icon ~~at least alternatively to presenting the generated indicia via a screen of the television.~~

49. (Currently Amended) The system of claim 48 wherein the means for processing the obtained data includes a means for ~~generating indicia~~ presenting the information about the obtained event consistent with user preferences.

50. (Previously Presented) The system of claim 48 wherein the event is notification of a received email.

51. (New) The method of claim 14, wherein the screen indicia comprises the instant message.

52. (New) The method of claim 14, wherein the screen indicia comprises information about a DVD with content being displayed on the television.
